PERMEABLE

DRIVEWAY SAFE

# Turfgrid™

This land stabilisation paver is a simple solution to control soil erosion around your home. Strong and versatile, Turfgrid™ can also be used for agricultural and industrial applications, including cattle troughs, and is effective for driveways and garden paths where grass is often left muddy after rain.

Charcoal

Due to natural variations in the raw materials we use, colours may vary from batch to batch. Always sight a physical sample before purchase.

## Turfgrid™

No. per m <sup>2</sup>	7.56 units
Approx. Weight	17.9 kg
No. per pallet	99

## Agricultural Usage

Turfgrid™ is the ideal solution for agricultural erosion control projects including stock yards, turf roadways and carparks.

- Easy to install
- Permeable paver
- Results in a flat, even ground surface
- Can be laid face up or face down
- Minimises water build up and risk to livestock health

- ✓ Permeable paver allows water to flow through
- ✓ Grass grows through paver
- ✓ Trafficable land stabilisation product
- ✓ Safe for driveways, cattle troughs and barns

# Exposed Aggregate Paving Range

Enhance your homes curb appeal with these designer Exposed Aggregate Pavers. With a great range of modern colours including those to match the council footpath, these pavers are easy to install and hard wearing.

Choose a premium Exposed Aggregate paver that best suits your home from the driveway range or the paths and patio range!

For MTO colour, exposed aggregate and textured finishes, talk to your local supplier.

Due to natural variations in the raw materials we use, colours may vary from batch to batch. Always sight a physical sample before purchase.

*'The perfect choice for adding texture and character on your next project'*

- ✓ Courtyards
- ✓ Paths
- ✓ Driveways
- ✓ Patio Areas

# Paving Maintenance

## **PAVING ADVICE**

For in depth paving advice, tips and hints please visit our DIY centre at [adbrimasonry.com.au/diy](http://adbrimasonry.com.au/diy) or download the CMAA Paving Maintenance Guide from [cmaa.com.au](http://cmaa.com.au).

## **MAINTENANCE**

Pavers will require some ongoing maintenance. Dirt, dust and leaves should regularly be removed whilst any weed growth should be sprayed and controlled.

## **SEALING**

For aesthetic and maintenance purposes, Adbri Masonry recommends sealing your paving.

## **CLEANING**

All pavers will require cleaning from time to time. Oil, rust, efflorescence and other stains can detract from the appearance of the paver. Proprietary cleaning products for concrete pavers (and retaining walls) are readily available.

## **EFFLORESCENCE**

Efflorescence is a naturally occurring by-product of the concrete masonry manufacturing process. Paving regularly exposed to a damp environment will prolong the chemical reaction that causes efflorescence, making the appearance of the efflorescence worse. Although efflorescence can never fully be avoided, there are some tips to help you minimise the likelihood of it affecting your project.

# Paver Installation Guide

Adbri Masonry Pavers can be laid by two methods; Rigid Installation (with a concrete basecourse) or Flexible Installation (a roadbase basecourse). Properly constructed rigid pavements can be more stable where soil conditions are poor, (e.g. reactive or poorly drained clay).

Drainage is most important for a successful paving project. Care must be taken to grade the basecourse and the finished pavement level at a minimum gradient of 2% (or 100mm per 5.0 lineal metres). Refer to the CMAA's PA05 document for further drainage details.

For further information please refer to: Adbri Masonry Paving Installation Guide at [adbrimasonry.com.au](http://adbrimasonry.com.au) and Concrete Masonry Association of Australia (CMAA) Guidelines at [www.cmaa.com.au](http://www.cmaa.com.au): - PA02 Concrete Segmental Pavements - Design Guide for Residential Accessways and Roads, PA05 Concrete Flag Pavements - Design and Construction Guide.

## FOUNDATION OPTIONS AND GENERAL INSTALL GUIDE

### FLEXIBLE INSTALLATION - ROADBASE & SAND

Typical Cross Section

### RIGID INSTALLATION - CONCRETE BASE

Typical Cross Section

**NOTE:** Always seeks advice from a qualified professional when laying pavers on sloped land or where soil conditions or load pressures are unknown.

### PAVER CUTTING

In some jobs cutting of pavers will be required to fit into specific areas. Brick saws can be hired to complete cuts. Remember to use and wear the appropriate safety equipment.

### EDGING

It is important to have a good edge restraint to stop the pavers from spreading and to ensure that the bedding sand is not washed away. Here are two general techniques:

1. By laying the edge course pavers on concrete.
2. By haunching the outside paver in concrete to approximately half the height of the paver and back filling with suitable garden material.

### HOW MANY PAVERS WILL YOU NEED ?

Using the helpful diagrams below, measure the desired space you would like to pave. This will give you a total square meter figure (Length(m) x width(m) = area(m<sup>2</sup>)).

#### FOR RECTANGULAR AREAS

$$\text{base(m)} \times \text{height(m)} = \text{area(m}^2\text{)}$$

eg.  $3\text{m} \times 5\text{m} = 15\text{m}^2$

#### FOR TRIANGULAR AREAS

$$1/2 \text{ base(m)} \times \text{height(m)} = \text{area(m}^2\text{)}$$

eg.  $1/2 \times 3\text{m} \times 4\text{m} = 6\text{m}^2$

#### FOR ODD SHAPED AREAS

Break into sections

Area 1:  $4\text{m} \times 3\text{m} = 12\text{m}^2$   
 Area 2:  $6\text{m} \times 3\text{m} = 18\text{m}^2$   
 Area 3:  $1/2 \times 2\text{m} \times 6\text{m} = 6\text{m}^2$   
 Total area to be paved =  $36\text{m}^2$

# Paving Pedestals/Pods

The use of pod support systems has grown in popularity for balcony and rooftop applications and is an ideal way to support pedestrian only loads. Pods allow the paving units to be supported over the waterproof membranes that are typically applied in these applications.

# Swimming Pools

Pavers are an excellent choice for paving around pools. Only Euro® range pavers are recommended for use around pools as they meet Australian slip resistant standards and are chlorine and salt resistant. Adbri Masonry recommends sealing pavers used in pool areas.

While strong and durable, the Euro® range of pavers have a smooth feel, making them comfortable under bare feet or for sitting along pool edges.

# Paving Patterns

There are many paving patterns you can choose to add character to your space. Understanding the patterns can assist you in choosing pavers as some patterns are more suited for rectangular pavers and others square.

Some important things to consider are:

- Some patterns will require cuts
- 'Stretcherbond' and 'Stackbond' are considered the most DIY friendly as it requires minimal cutting and leaves little wastage
- On a flexible base (compacted road base and sand), pavers must always be laid with a 3mm gap to avoid the edges chipping.

## SQUARE PAVERS

Stackbond

Stretcherbond

45° Stackbond

45° Stackbond with header course

Step Stones

## RECTANGULAR PAVERS

Stretcherbond

Basketweave

Herringbone

45° Stretcher with header course

45° Herringbone with header course

# How to Lay Pavers (Flexible Installation)

## YOUR CHECKLIST

- ✓ PPE – Gloves, safety glasses, hearing protection and respirator (if cutting)
- ✓ String line and marking spray paint
- ✓ Road base (enough for 75mm compacted depth)
- ✓ Gap sand
- ✓ Measuring tape
- ✓ Rubber mallet
- ✓ Shovel / spade
- ✓ Washed river sand (enough for 30mm depth)
- ✓ Cement (to mix with sand for haunching)
- ✓ Spirit level
- ✓ Timber stakes
- ✓ Wheel barrow
- ✓ Plate compactor
- ✓ Float and trowel

## STEP 1 Marking out and excavation

The first thing you need to do is to mark out where your paved area will be and excavate approx. 170mm deep.

Don't forget to Dial before you Dig before excavating, call 1100!

## STEP 2 Base foundation

Next, add in your road base which serves as your solid base foundation for the pavers.

Then go over the entire area with a plate compactor. Remember your hearing protection!

Then, lay and screed the paving sand to a depth of 25-30mm.

It is very important that you take your time on this step as it will ensure your finished job is of high quality and looks great.

### JASON'S TIP:

Use screed rails to make screeding easier.

## STEP 3 Laying the pavers

Set up a string line and lay the header course of pavers.

Take your time and remember to leave a 3mm gap between pavers.

## STEP 4 Haunching the edges

Haunch in the sides of the paved area to ensure your pavers will stay in their location for years to come!

HOW? Using a stiff, damp sand and cement mix, haunch in pavers by applying the mix to the side of the pavers at a 45 degree angle.

## STEP 5 Sweep in gap sand and finish

The final step is to sweep gap sand into the paver joints, filling the voids.

Then, compact the pavers to ensure they are embedded and that there is no lipping.

### JASON'S TIP:

Attach a piece of old carpet under the plate compactor to avoid damaging pavers.

Finally, spray the pavers with water to remove any excess sand or dust.

Enjoy!
